newtrickpony.com

Independent inventor — 11 patents & patent applications across medical devices, veterinary diagnostics, wildfire detection, and athletic safety. Most with working or in-progress prototypes.

Seeking: a licensing / business-development partner with concrete access to universities, medical-device or diagnostics companies, veterinary institutions, utilities, or emergency-services organizations. **Terms:** no upfront fee — product-specific royalty or revenue share on licensing or partnership revenue from counterparties the partner materially introduces or advances. Proposed start: a focused 60–90 day trial engagement.

COMMERCIALIZATION-READY — no human or animal testing required

L3FD™ wildfire detector	Tower-mounted thermopile array detects campfire-sized ignition up to 1 km, flame-signature IR analysis rejects false positives. Built from industrial commodities with guaranteed performance specs.	Patented #12,424,068 Prototype in progress
Siren Guide™	Metamaterial waveguide directs siren energy at street level, cutting the upward/lateral noise that is the top complaint in dense cities.	Patented #11,202,144 Prototype tested

TRIAL-READY — validation path designed

Hydrogel Ball™ / Diagnostic Platform	Salivary sampling that captures and concentrates biomarkers via cyclic hydrogel compression, overcoming 100–1,000× salivary dilution. Patents cover 14 human conditions plus veterinary use; canine periodontitis (MMP-8) is the lead validation path.	Patent pending, published (US + PCT)
Chulites™	Chewable home-use device emits 405 nm antibacterial light against canine periodontal pathogens; 2–3 minute pathogen-load reduction in prototypes.	Patented #11,122,775 Prototypes built

EARLY-STAGE — patented concepts, development ongoing

GI capsule suite (MCap™, Encapsulated Microspheres™)	Light-controlled stop/slow capsule motility, tether retrieval, and ultrasound-visible coatings for radiation-free tracking.	2 patents + pending
Helmet & brain-injury suite	Detent Helmet™ magnetic-release rotation decoupling; Steadihelm™; rotation sensor; instrumented anatomically layered model brain for impact testing.	2 patents + pending; brain prototype in progress
ABC Capsule™ / Triboelectric Energizer	Rumen-motion energy harvesting powers in-vivo LEDs or sensors for the life of the animal; antibiotic-free productivity concept.	Patented #11,800,851 + pending

Commercial Highlights

- **L3FD:** SDG&E and PG&E have expressed interest. High-risk corridor coverage ≈ \$10M (SDG&E) and \$20M (PG&E); a 1–2% reduction in fire-escape probability exceeds deployment cost in liability reduction alone.
- **Veterinary diagnostics:** ~\$60M serviceable market (2% of \$3B veterinary dental spend); dentistry is veterinarians' leading growth area, currently constrained by anesthesia-dependent diagnosis. Chulites addressable market ≈ \$15M.
- **Human diagnostic platform:** non-invasive salivary sampling with a simpler FDA path; veterinary validation de-risks and precedes the human market.
